DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10, 12, and 14-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Braun (5,997,004).

Braun discloses a brush seal assembly for and method of sealing a gap between a first component and second component comprising a body 34, bristles 32, and an extension 40 having an elongated (in the axial direction) slot 68 that allows the assembly to axially float within the gap. The assembly comprises a spring 76, which, depending whether 52 is first or second component, biases the seal against or away from the second component.

Regarding claims 3, etc., the assembly is considered an axial brush seal in that it can seal axially along a surface, as applicant has not set forth any further definition of “axial brush seal.”

Braun discloses an apparatus comprising a first component 52 and second component 72, wherein the second component includes an elongated (in the axial direction) slot and a member 72 that allow the brush seal to move in an axial direction.

The method is inherent from the apparatus.

3. Claims 7, 9-13, and 15-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Bouchard (6,170,831).

Art Unit: 3676

Bouchard discloses an apparatus comprising a first component 70/54, second component 48, and an axial brush seal assembly comprising a body and bristles 92. The brush seal comprises a member 94 extending into an elongated slot 96 to allow the seal to move in an axial direction (see col. 5, lines 18-19). The bristles engage both the components. Regarding claim 11, the slot could be cavity 76 (in 54 and 70) such that the brush seal resides in the slot. The method is inherent from the apparatus.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
